Certainly, here are shorter steps to create a channel in Hyperledger Fabric:

1. **Network Setup:** Set up your Hyperledger Fabric network with organizations, peers, and orderers.

2. **Generate Crypto Material:** Use Cryptogen to create cryptographic keys and certificates for organizations and peers.

3. **Create Genesis Block:** Use `configtxgen` to create the Genesis Block.

4. **Start Orderer Nodes:** Launch orderer nodes with the Genesis Block.

5. **Join Peers:** Use `peer channel join` to make peers part of the channel.

6. **Create Channel Tx:** Generate a channel configuration transaction with `configtxgen`.

7. **Anchor Peers:** Update channel config with anchor peers using `peer channel update`.

8. **Distribute Artifacts:** Share channel artifacts with relevant parties.

9. **Join Organizations:** Have each organization's peers join the channel.

10. **Install & Instantiate Chaincode:** Deploy and activate chaincode on the channel for smart contract execution.
